 This international preliminary examinand is transmitted to the applicant account. 	ation report has been pording to Article 36.	prepared by this Interna	ational Preliminary Examining Au	thori
2. This REPORT consists of a total of		including this cover st	1eet	
This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rul				
70.16 and Section 607 of the Administrative Instructions under the PCT). These annexes consist of a total of 6 sheets.				
These differences consist of a total	0 5	sneets.		
3. This report contains indications relating	ig to the following iter	ms:		
I Basis of the report				
II Priority				
III Non-establishment of	opinion with regard to	o novelty, inventive step	p and industrial applicability	
IV Lack of unity of inven	tion			
V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;				
VI Certain documents cited				
VII Certain defects in the international application				
VIII Certain observations on the international application

		Claims		NO NO

2. Citations and explanations

WO 98/54030 (document D6), which is considered to be the prior art closest to the subject matter of claim 1, discloses a multifunctional lighting device with the features specified in the preamble of independent claim 1.

The problem addressed by the present invention can be seen as that of improving the multifunctional lighting device so that when the semiconductor light source and the sensor are used at the same time the beam paths of the light and of the sensor ensure increased measuring precision.

The problem is solved by the features specified in the characterising part of claim 1, more particularly the optical systems with different emission and reception characteristics, the projection of which in a two-dimensional plane corresponds to a cylindrical two-dimensional Cartesian oval.

Optical systems with different emission and reception characteristics in multifunctional lighting devices are already known in the art (see document D11), as are Cartesian oval optical systems in lighting devices (see, for example, documents D2 and D10). However, there are no references in the cited prior art (D1, D3 to D9 and D11) to a combination of semiconductor light sources and sensor elements with Cartesian

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT 03/13917

oval optical systems that might enable a person skilled in the art to arrive at a multifunctional lighting device as specified in claim 1 without making an inventive contribution. The subject matter of independent claim 1 therefore meets the requirements of PCT Article 33(2) and (3).

Independent method claim 10 and independent use claims 12 to 16 refer back to the product according to claims 1 to 9, and therefore also meet the requirements of PCT Article 33(2) and (3).

Claims 2 to 9 and 11 are dependent on claims 1 and 10 respectively and therefore also meet the PCT requirements in respect of novelty and inventive step.

Claims 1 to 16 are industrially applicable.
